In my opinion, it is necessary to think out of the box in order to stand out from the crowd. In our time only creative and unusual ideas can receive considerable attention and achieve public recognition. The world is full of various theories, suggestions, and thoughts. Many things that were considered to be extraordinary are now viewed as something obvious. That is why we have to learn how to connect things which are perceived as unrelated by the majority of people. Luckily, this skill can be developed by anyone who wants to change his or her way of thinking. Psychologists have proven that everyone can create new relations between abstract concepts.

The techniques which suggest to come up with a list of words and objects are the most effective for me. These are really helpful strategies because they make you think about the connections between things which seemed to be totally unrelated to each other. In this case you are simply forced to use your creativity and imagination; otherwise, you will fail to accomplish this task. In its return, these new connections awake new associations which lead us toward creating an incredible idea. Group work in this situation is even better than individual work because more people can produce more ideas. Group members show support for one another and are willing to help their team. Final goal connects the group and makes it work as one whole for achieving common aim: to change usual thinking patterns.

At the beginning it might be quite challenging to apply unpredictable thinking; however, with time you brain get used to the new way of thinking and it becomes a natural process for you. Similar to other tasks, the process of learning how to connect unrelated things requires time, efforts, practice, and patience. Even if it seems impossible to find some relations between the opposite ideas, we cannot give up or step back. The final result should be an inspiration and stimuli for us to move on.

Elegant Plot Design

The image shows a screenshot of the NCSS software interface. On the left, there is a 'Plot Design' window with various options for customizing a bar chart. A callout box says 'Save your plot settings for future use'. Another callout says 'Control each aspect of the plot with straightforward plotting options'. The main window shows a preview of a bar chart titled 'Heat Rate vs Treatment' with three bars labeled 'Low', 'Medium', and 'High'. A callout box says 'View the changes in the format of the plot, as you make them'. Another callout says 'As you mouse over the plot format options, details about the option will appear in the option info area'. A final callout says 'The Plot Preview shows exactly how the plot will appear in the output'. The bottom of the interface shows a 'One-Way Analysis of Variance' window.
